BY INTRODUCING NEW LINE OF  
WHEAT STRAW & RECYCLABLE  
PLASTIC PRODUCTS. WE'RE GLAD  
THAT WE CAN CONTRIBUTE  
IN PROTECTING THE  
ENVIRONMENT.

### SINGLE-USE PLASTIC

Single-use plastics, or disposable plastics, are used only once before they are thrown away or recycled. We produce hundreds of millions of tons of plastic every year, most of which cannot be recycled. Single-use plastic has an amazing carbon intensity life cycle: dumped or burned it emits carbon dioxide, and when recycled, the process itself emits greenhouse gases either directly or through the energy required to complete the process. So the single-use plastic's carbon footprint continues even after we've finished disposing or recycling.

### WHEAT STRAW PLASTIC

Wheat straw plastic is a new and innovative bio-plastic that can be used as an eco-friendly alternative to petroleum based single-use plastics. Like traditional plastics, wheat straw plastic is extremely lightweight and durable, but unlike plastic, wheat straw plastic is not manufactured from fossil fuels. When disposed or recycled, the wheat straw plastic products degrade into less harmful components for the environment. We do believe that our new product line, made of wheat straw plastic and wrapped into recycling paper printed with vegetable ink, will contribute in protecting the environment.
